

REVOLUTIONARY TOOL SYSTEM...

OX SPEEDSKIM®

Speedskim® is the new & revolutionary tool system designed to increase metrage output and enhance quality of finish – at the same time significantly reducing the harmful effects of fatigue & RSI.

WHAT DOES THE TRADE SAY?

“Essential bit of kit. One of the greatest innovations in the last 30 years”

“I’ve said it before and say it again. I wouldn’t be without mine”

“Only got mine 3 weeks ago makes life so much easier””

“Would be lost without mine now”

“Fantastic tool to use, makes a hard day lighter”

“Been plastering 42 years, sceptical at first, wouldn’t be without one now, great piece of kit”

“Absolutely tremendous piece of gear. Wouldn’t be without one now. Weighs next to nothing too”

PRO SPEEDSKIM – ST (PLASTERING & RENDERING)

The Speedskim ST blade (our original blade) is fundamental to achieving fastest plastering results. Strategic ribs on the ST blade grip and distribute the plaster material leaving the surface incredibly flat. In doing so the unique rib design reduces surface moisture (how? – through reduced sound vibration), which is crucial to shortening the overall working time!

Unique properties of the ST blade edge mean the first coat of plaster can be flattened immediately after application. Reduction in surface moisture during first flatten mean second coat can be applied straight away, followed by immediate second flatten using the ST. Condensing the working time during these initial stages by using the ST blade typically knocks 40 minutes off a standard gauge of plaster!

FEATURES

- Flattening, finishing & ruling off
- Compatible with all gypsum based plasters (hand and spray applied), Traditional sand & cement renders and insulated rendering systems
- Complete with integral blade guard

PRO SPEEDSKIM – SF (FINE FINISHING & DRYWALL)

Offering the Plasterer choices we have developed new exciting composite blades SF (Ultra-Fine Stainless Finishing) and coming soon, PF (Ultra-Fine Plastic Finishing), not only to speed up and enhance the final finishing process, but also further reduce harmful fatigue!

By simply changing the angle of use (21° recommended for flattening and finishing), to approx. 70° recommended for 'ruling off', the Speedskim® ST blade becomes inherently more rigid. In changing the angle of your Speedskim® to be more perpendicular to the substrate, the blade distributes backing plasters and renders (including insulated renders) with ease. Perfectly balanced, the ST blade closes material in leaving it ideal for top coats and finishing plasters.

FEATURES

- Ultra-fine 0.3mm stainless steel blade
- Fine finishing of plaster, drywall & tape & jointing
- Compatible with all gypsum based finishing plasters (hand and spray applied), Jointing systems and compounds
- Complete with integral blade guard
